

Team ICE consists of four undergraduate engineering students from Arizona State University, Gates Browne, Sonia Runyan, Daniel Berriz, and Brian Nicholls. Daniel is studying Mechanical Engineering and the remaining team members are enrolled in the Civil Engineering program at ASU. The teams interests range from structures and land development to aerospace and transportation. Brian and Gates will be graduating in May 2009, Sonia in December 2009, and Daniel in May 2010.

## Le Château de la Belle et la Bête

Scanning the globe one notices the void of Disney Parks in the southern hemisphere. With this in mind Team ICE set out to locate a prime area for a new Disney Park in the southern hemisphere. Our team discovered that Sydney, Australia has optimal weather, population, and tourist draw to create an ideal park environment. The idea came to create Disneyland Down Under. With the move to the southern hemisphere we felt the need to “plus” the centerpiece of the park. With a new application for the Disneyland Castle we felt there was no more fitting animated feature than the film with the most impact on Disney’s Animation Renaissance, “Beauty and the Beast”. Le Château de la Belle et la Bête translated, “The Castle of Beauty and the Beast” is the centerpiece of our project.
